

User survey on the Manual Erection System

Results from January 2017 to November 2025

Medintim

User survey on the Manual Erection System

Since January 2017, users of the vacuum erection aid **Manual Erection System** have been questioned. We are interested in satisfaction with the product and frequency of use, as well as the age and medical history of respondents. As a thank you, survey participants will receive a tube of Animé lubricant and two constriction rings.

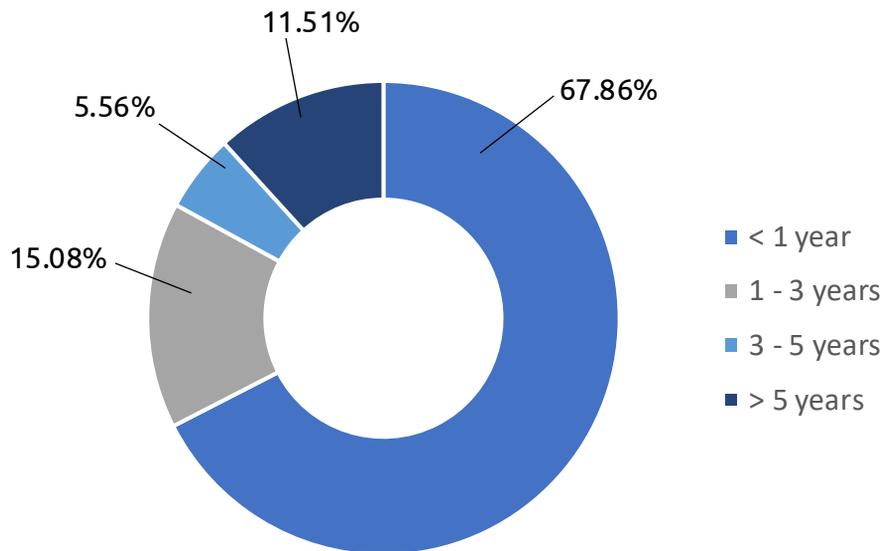

The survey is being conducted by the manufacturer Medintim. The evaluation is based on a total of 361 responses as of 30 November 2025.

The following questions were posed to users:

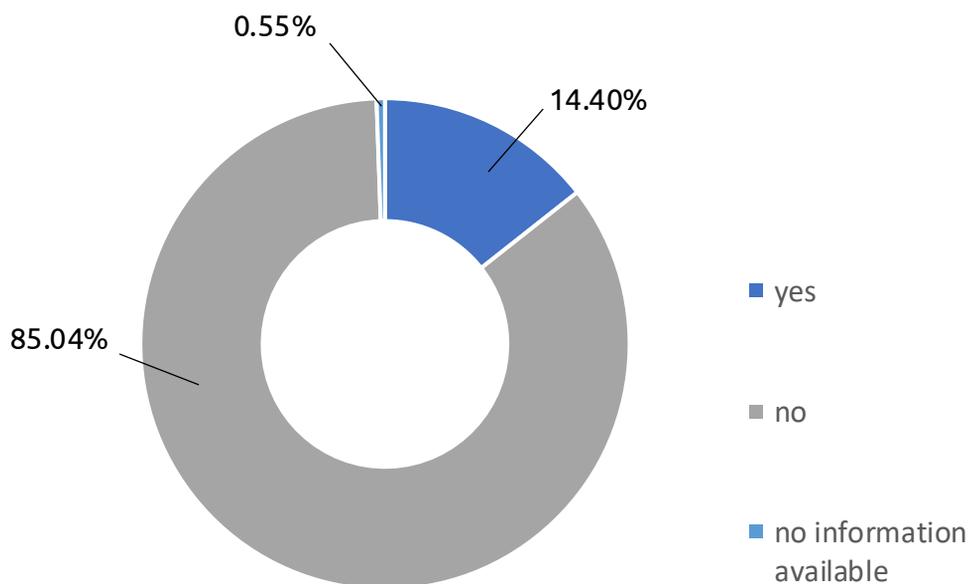

- 1) How long have you been using our vacuum pump?
- 2) Did you have a vacuum pump before?
- 3) How often do you use the vacuum pump?
- 4) How satisfied are you with the operation of the vacuum pump?
- 5) How satisfied are you with the performance of the vacuum pump?
- 6) Did you encounter any problems during use? If so, what were they?
- 7) Which constriction ring size do you usually use?
- 8) Would you recommend our product to others?
- 9) How did you find out about the vacuum pump?
- 10) Who did you purchase the vacuum pump from?
- 11) Do you have a medical condition?
- 12) Have you used other forms of therapy before?
- 13) Do you have a steady sexual relationship?
- 14) How old are you?
- 15) How important is the vacuum pump for your sexuality and your self-confidence as a man?

Use of the Manual Erection System

1) How long have you been using our vacuum pump?

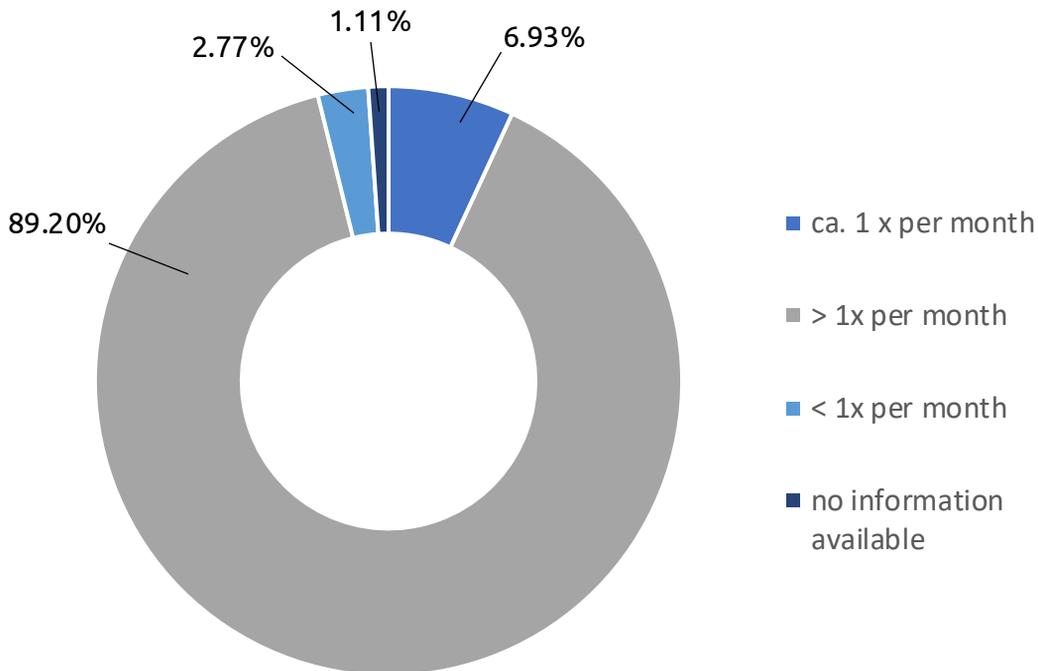

2) Did you have a vacuum pump before?

Use of the Manual Erection System

3) How often do you use the vacuum pump?

Summary:

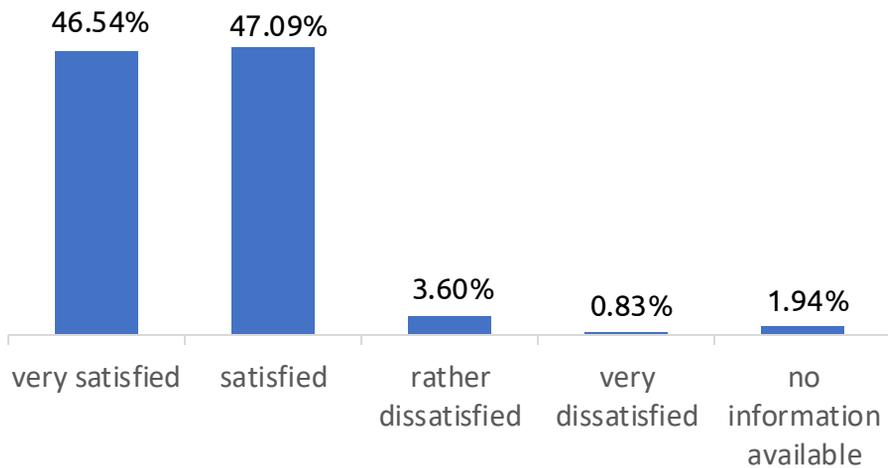

For most users, the vacuum pump is the first device they use for erectile dysfunction. Only 14% had previously used another vacuum pump (see question 2).

Approx. 89% of respondents use the device more than once a month. Remaining sexually active with one's partner despite health limitations remains a significant need.

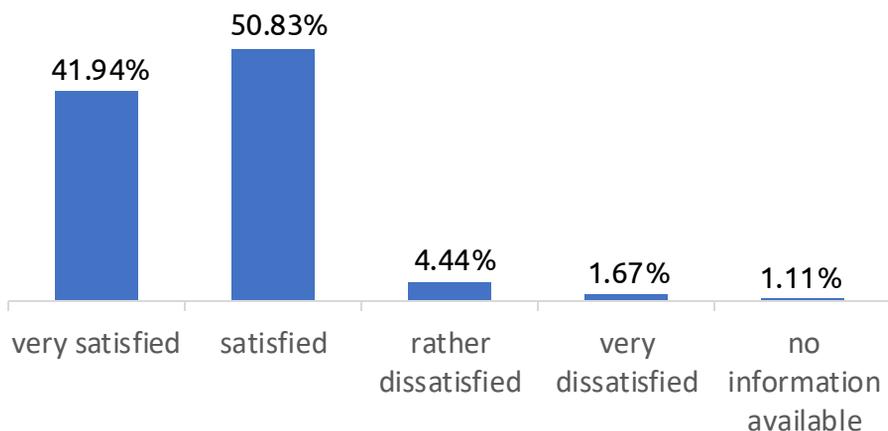

With regard to the general duration of use (see question 1), the vast majority of users (approx. 68%) have been using the device for less than a year.

Satisfaction with the Manual Erection System

4) How satisfied are you with the operation of the vacuum pump?

5) How satisfied are you with the performance of the vacuum pump?

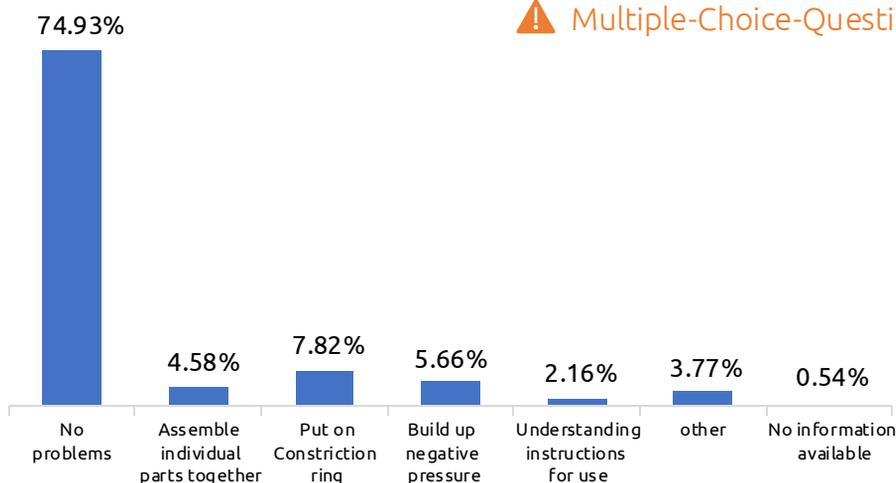

Summary:

Almost all respondents are satisfied to very satisfied (over 90%) with both the operation and the results of the Manual Erection System. In terms of evaluations from previous years, there is a stable trend of high customer satisfaction with the product.

Application of the Manual Erection System

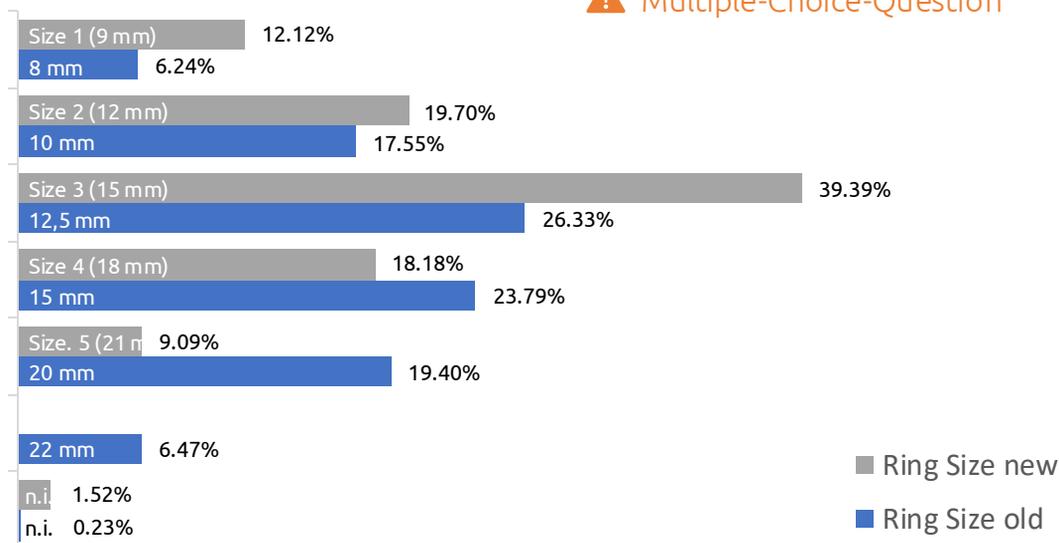

6) Did you encounter any problems during use? If so, what were they?

⚠ Multiple-Choice-Question

7) Which constriction ring size do you usually use?

⚠ Multiple-Choice-Question

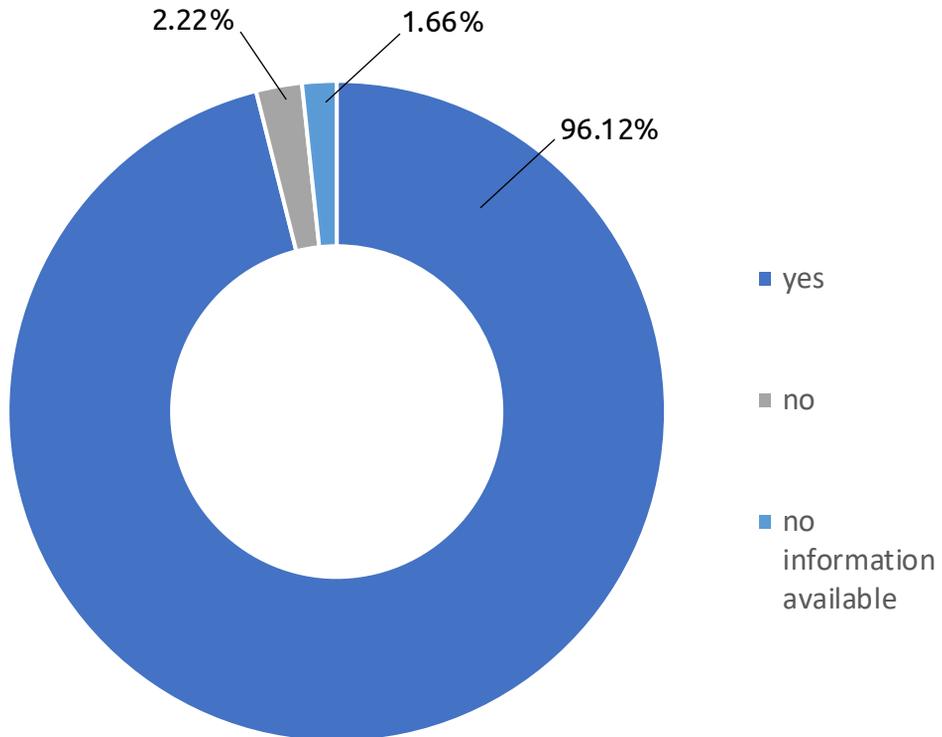

Note:

Since June 2022, the manufacturer Medintim has been offering new stents with an improved design and adjusted sizing (e.g., only 5 sizes instead of 6). Accordingly, the new ring sizes were only added to the survey flyer at a later date and, at the time of evaluation, had fewer responses than the previous stasis ring sizes (n=66 for new ring sizes).

Recommendation of the Manual Erection System

8) Would you recommend our product to others?

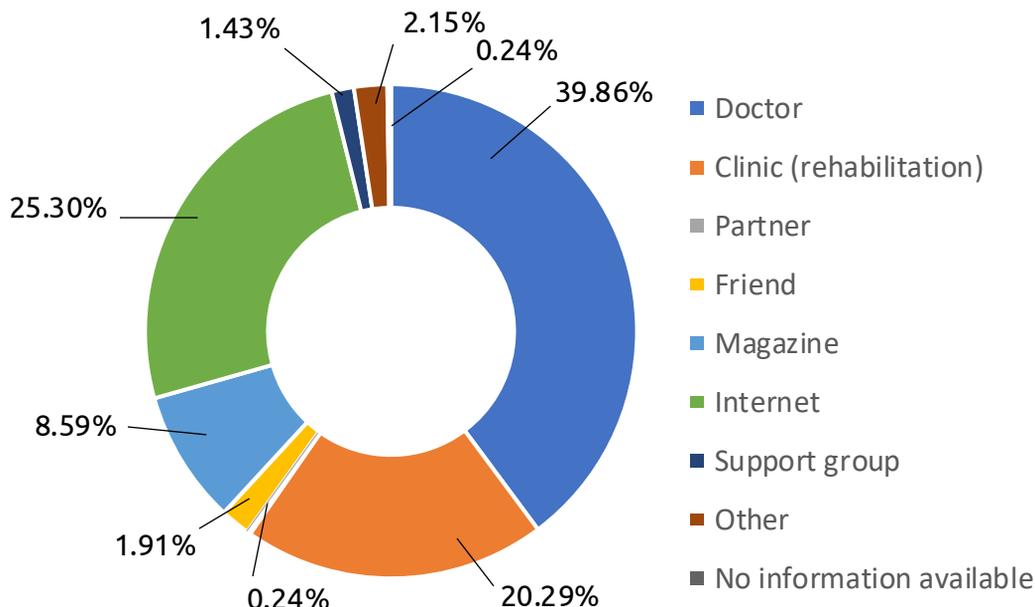

Summary:

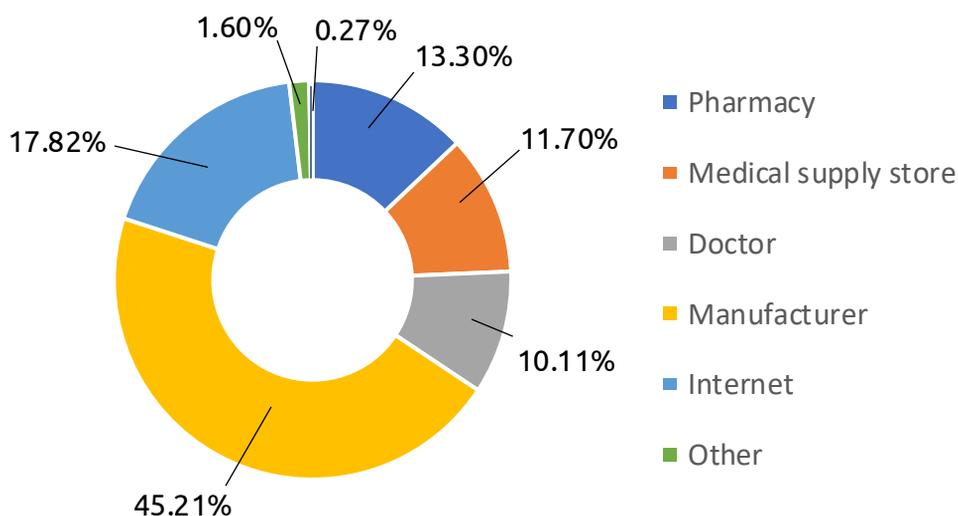

Due to the high level of satisfaction with the product and its ease of use, almost 96% of all users surveyed would recommend the Manual Erection System to others. Reasons cited included ease of use and high quality. Users also appreciate that the vacuum erection aid provides a solution that does not require the use of tablets.

Information about the Manual Erection System

9) How did you find out about the vacuum pump?

10) Who did you purchase the vacuum pump from?

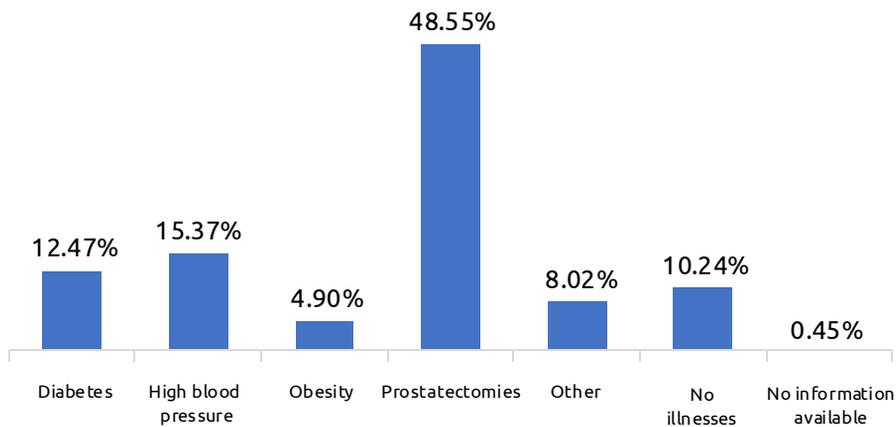

Summary:

Most men first learn about the Manual Erection System from their doctor, followed by information from the Internet. The device is usually purchased directly from the manufacturer; other common sources are the treating physician or Internet providers.

Pre-existing conditions and other forms of therapy

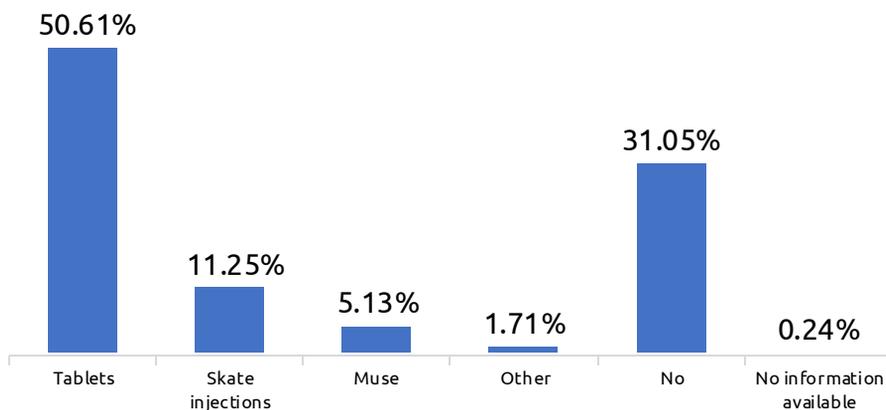

11) Do you have a medical condition?

Summary:

Approximately half of the users state that they have already undergone a prostatectomy. High blood pressure and diabetes were also frequently cited as pre-existing conditions.

12) Have you used other forms of therapy before?

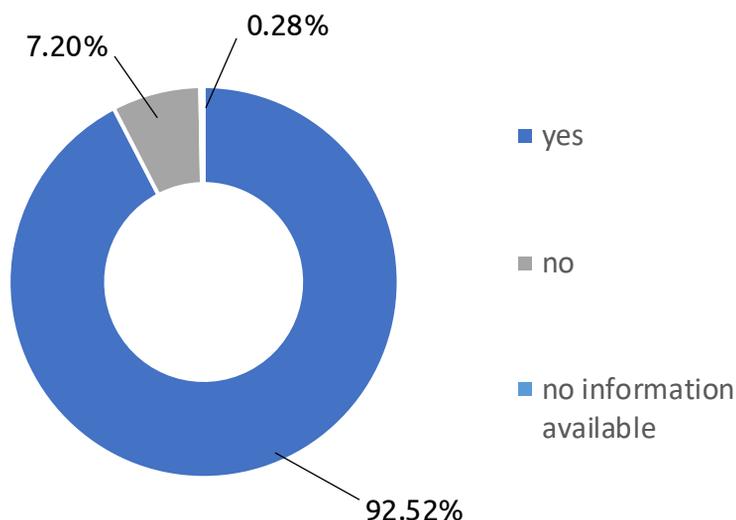

Summary:

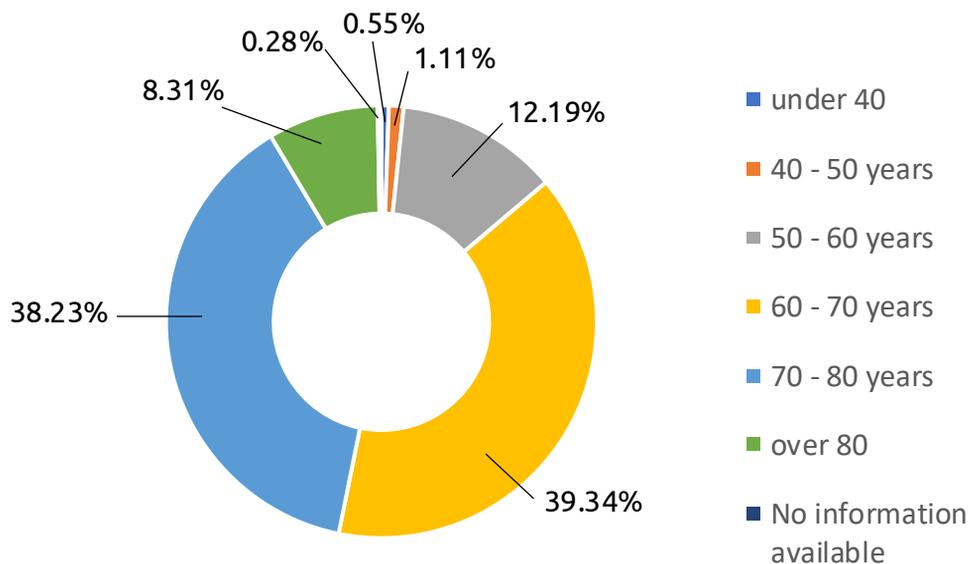

More than half of users had previously used tablets to treat their erectile problems. The next smallest group had not previously used any other forms of therapy.

Personal information

13) Do you have a steady sexual relationship?

14) How old are you?

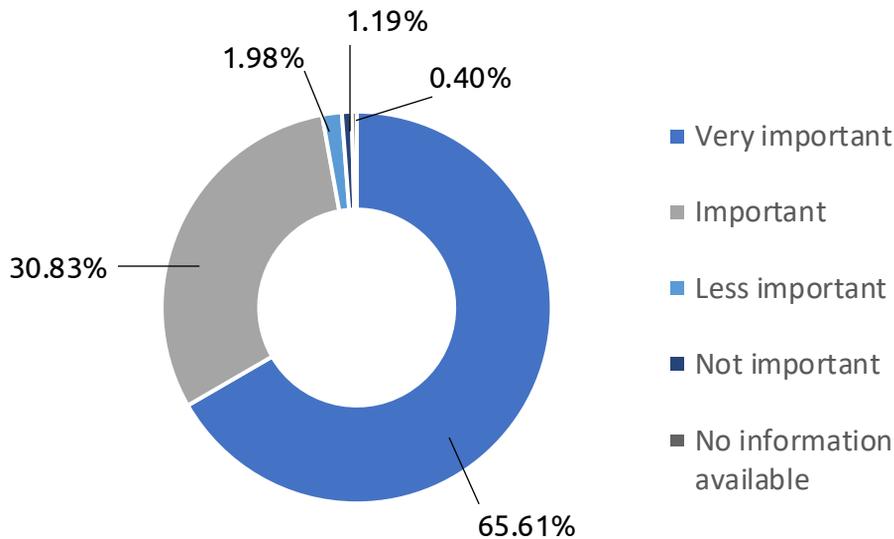

Summary:

The vast majority of men are between 60 and 70 years old and are in a stable sexual relationship. However, 8% of respondents are already over 80 years old.

Self-confidence and sexuality

15) How important is the vacuum pump for your sexuality and your self-confidence as a man?

Summary:

Even in old age, the majority of users still consider sexuality and “feeling like a man” to be important or very important. Some of the users' comments are published anonymously below. Note: This last question was added to the questionnaire later, which is why the number of responses in this case is 253.

Fulfilled mutual sexuality.

Without a vacuum pump, sex is pretty much impossible!

Improves quality of life and self-confidence

A new attitude towards life!

I don't need medication and am always ready..

I want to feel like a man and for my partner.

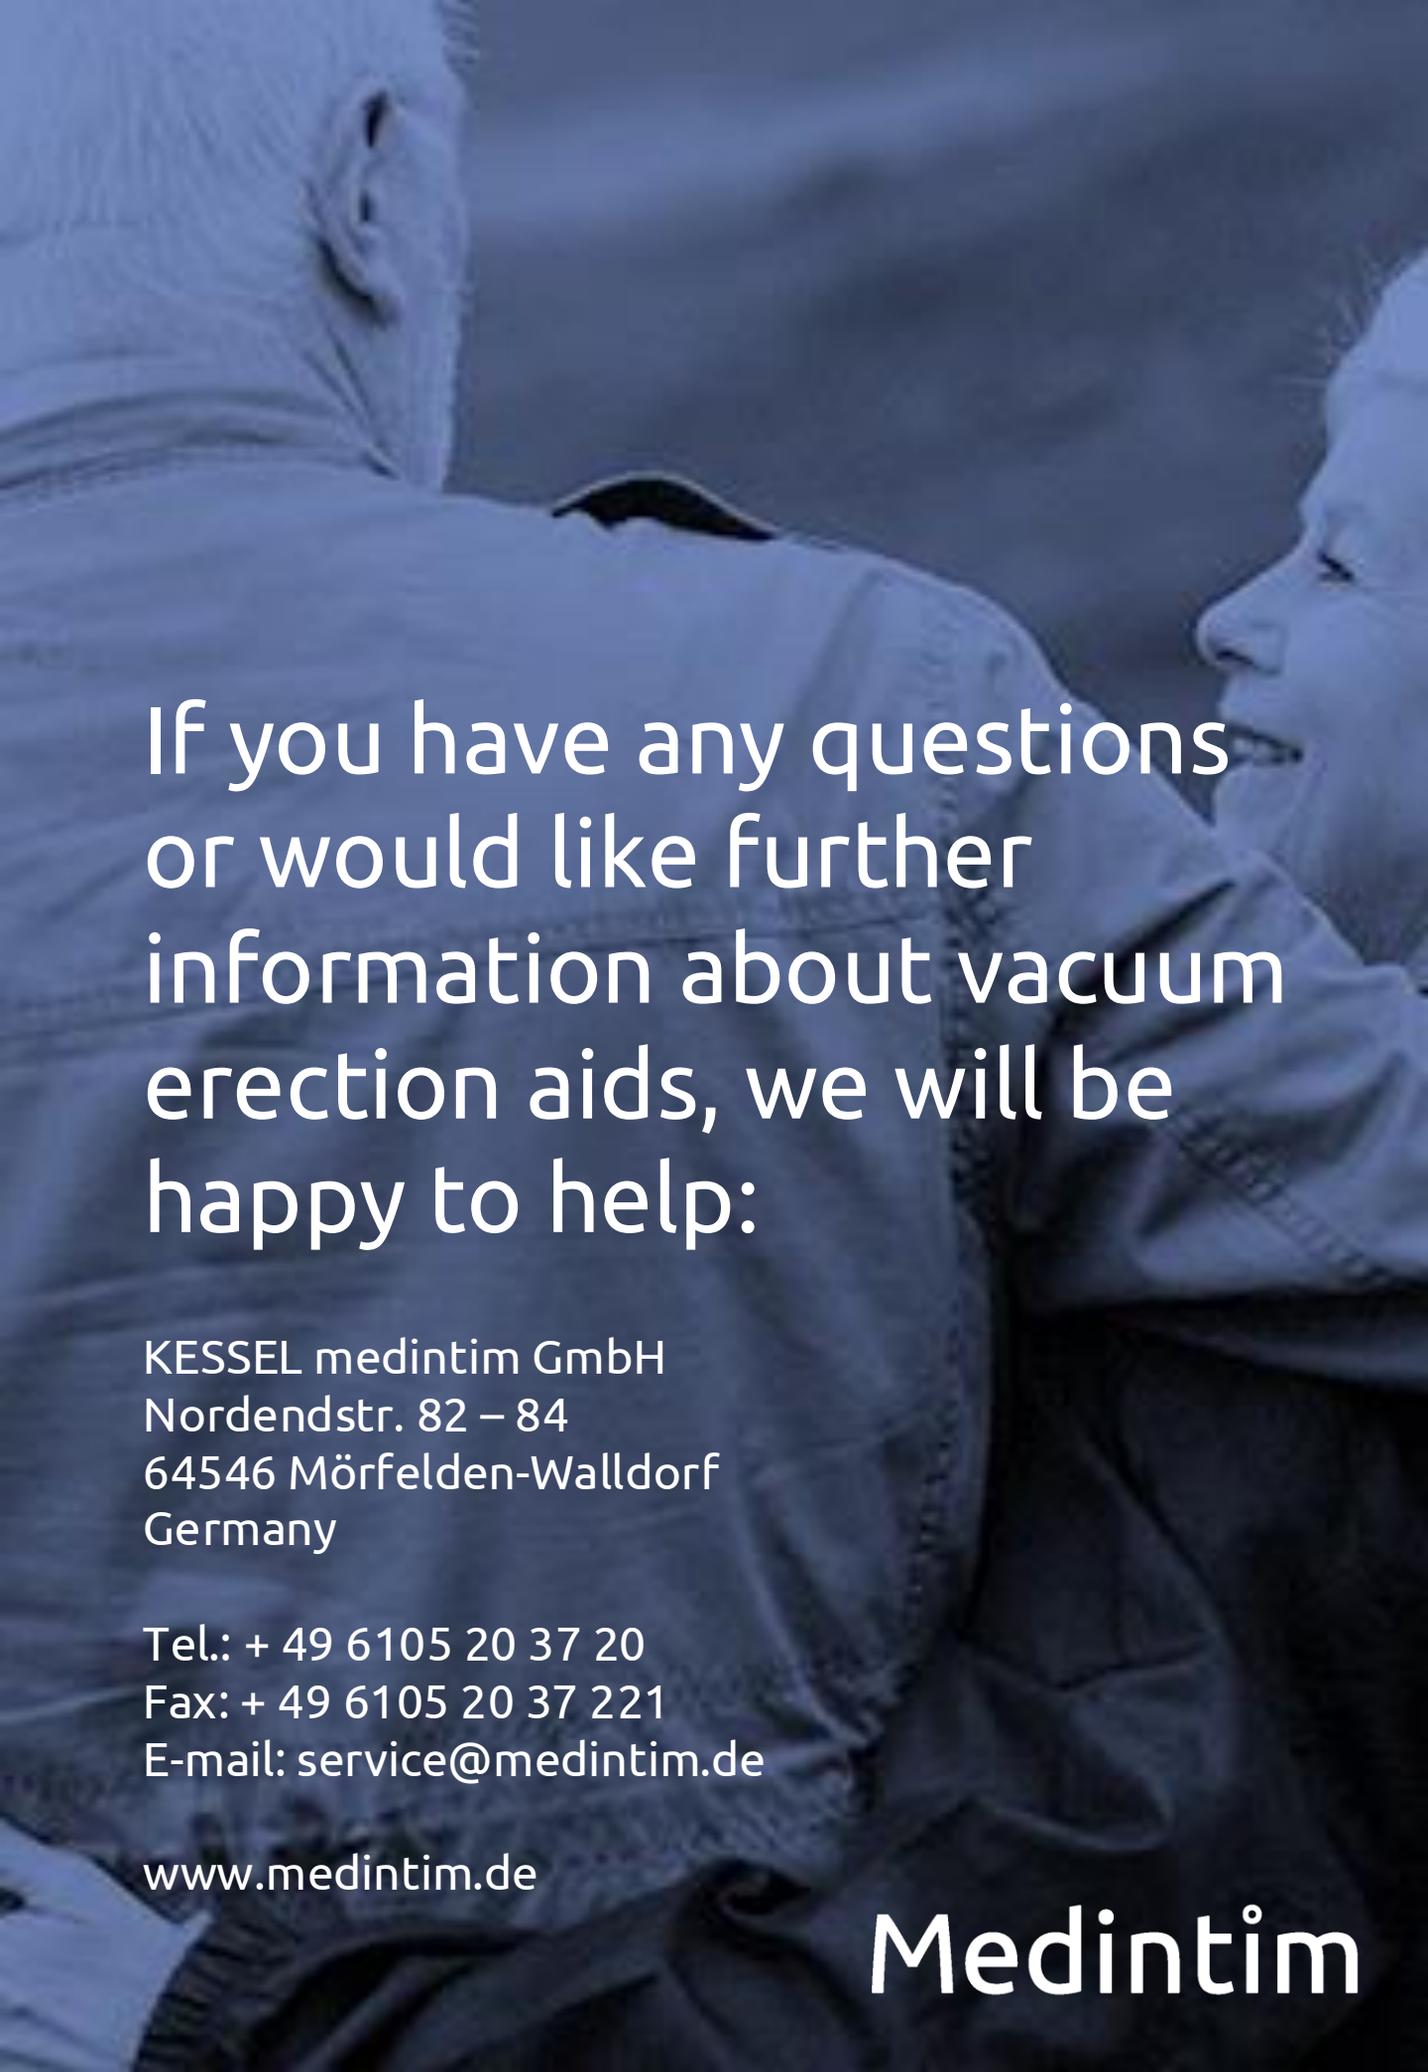

Our conclusion:

The vacuum erection aid **Manual Erection System** can be considered a cost-effective, reliable, and satisfactory aid for erectile dysfunction. A fulfilling and satisfying sex life is still possible even after the age of 60 and into old age, even beyond 80. The user survey will continue, with further responses being collected, evaluated, and published by us.

We would like to express our sincere thanks to everyone who has participated in this survey so far! Your feedback provides us with valuable insights and enables us to continuously improve our products and ensure customer satisfaction.
